OPod is a low cost, micro living housing unit to ease Hong Kong's affordable housing problems. Constructed out of low cost and readily available 2.5m diameter concrete water pipe, the design utilizes the strong concrete structure to house a micro-living apartment for one/ two persons with fully kitted out living, cooking and bathroom spaces inside 100 sq.ft. Each OPod is equipped with smart phone locks for online access as well as space saving furniture that maximises the space inside. OPod can be stacked to become a low rise building and a modular community in a short time, and can also be located/relocated to different sites in the city.

The Pad is a 26 storey tall / 256 apartments residential building located in Business Bay, Dubai, UAE. The Pad's architecture is inspired by the Apple iPod, and scales up the form of an iPod to a building scale. The architecture is designed by James Law of James Law Cybertecture from Hong Kong winning out from a competition against Foster & Partners, and Zaha Hadid Architects. The building has been designed to be a new type of architecture which takes on board the technological advances available currently to allow inhabitants to program their own software for their building. This philosophy to this new architecture is called Cybertecture. Its structure is inclined at 6.5 degrees as a leaning tower as a design reference to the original iPod.
